M³G PRIVACY POLICY

We would like to inform you about the personal data that ROB is collecting in the frame of its activities as "**GNSS Metadata Management and distribution system for Multiple GNSS Networks – M³G**" (https://gnss-metadata.eu).

Content: In order to perform our role as Central Bureau of the EUREF Permanent Network (EPN) and GNSS station metadata management system for the European Plate Observing System (EPOS), we maintain information on agencies and associated contact persons involved in the provision of GNSS data from EPN and EPOS stations. For some agencies, this includes personal data such as names, business telephone numbers, and emails.

Purpose: ROB uses the names and business email addresses for contacting by email people for non-commercial communications related to the GNSS stations they are involved in.

Location and re-use: ROB stores these personal data in its internal database, but they are also publicly available without restrictions from our the M³G web and ftp site. This is necessary to allow users of the GNSS data to contact GNSS station responsibles whenever they need clarification or have questions about the provided GNSS data.

Historical info: The personal data is kept as long as the agency is providing GNSS data to the EPN or EPOS. When personal data are updated or replaced by the personal data of another person, the old data are deleted.

Editing and removal: If you do not want your name and other personal contact information to be stored within **M³G** or appear on the public area of **M³G**, then contact us at m3g@oma.be.

Registered agencies can update, correct, and remove on-line in **M³G** any personal data.
