

M³G PRIVACY POLICY

Last update: 16/11/2018

This document provides information on the collection and distribution of personal data that ROB is collecting in the frame of its activities as “**GNSS Metadata Management and distribution system for Multiple GNSS Networks – M³G**” (<https://gnss-metadata.eu>).

Content: In order to perform our role as Central Bureau of the EUREF Permanent Network (EPN) and GNSS station metadata management system for the European Plate Observing System (EPOS), ROB collects and distributes information on agencies and associated contact persons involved in the provision of GNSS data from EPN and EPOS stations. For the contact persons, ROB collects names, business telephone numbers, and emails.

Purpose: ROB uses the names and business email addresses of the contact persons solely for sending (non-commercial) emails related to the GNSS stations they are involved in.

Location and re-use: ROB stores these personal data in its internal database. For users who have provided their consent, the personal data are also publicly available without restrictions from our web and ftp site. This information is useful to allow users of the GNSS data to contact GNSS station responsible whenever they need clarification or have questions about the provided GNSS data.

Historical info: The personal data is kept internally at ROB as long as the agency is providing GNSS data to the EPN or EPOS. When personal data are updated or replaced by the personal data of another person, the old data are deleted.

Editing and removal: The M³G web site allows (after login) to update, correct, and remove on-line any personal data. In addition, contact persons can indicate if they agree (or not) to make publicly available their personal data without restrictions.
